VIGGO C10 OFFSHORE

VIGGO BOATS

VIGGO C10 OFFSHORE OVERVIEW

The Viggo C10 Offshore has been engineered for serious offshore capability, combining Scandinavian design with the strength and durability of marine grade aluminium construction. Central to the C10 Offshore is Viggo's proven high efficiency hull concept, further refined with pronounced double chine lines, a sharper bow entry and a central trim tab.

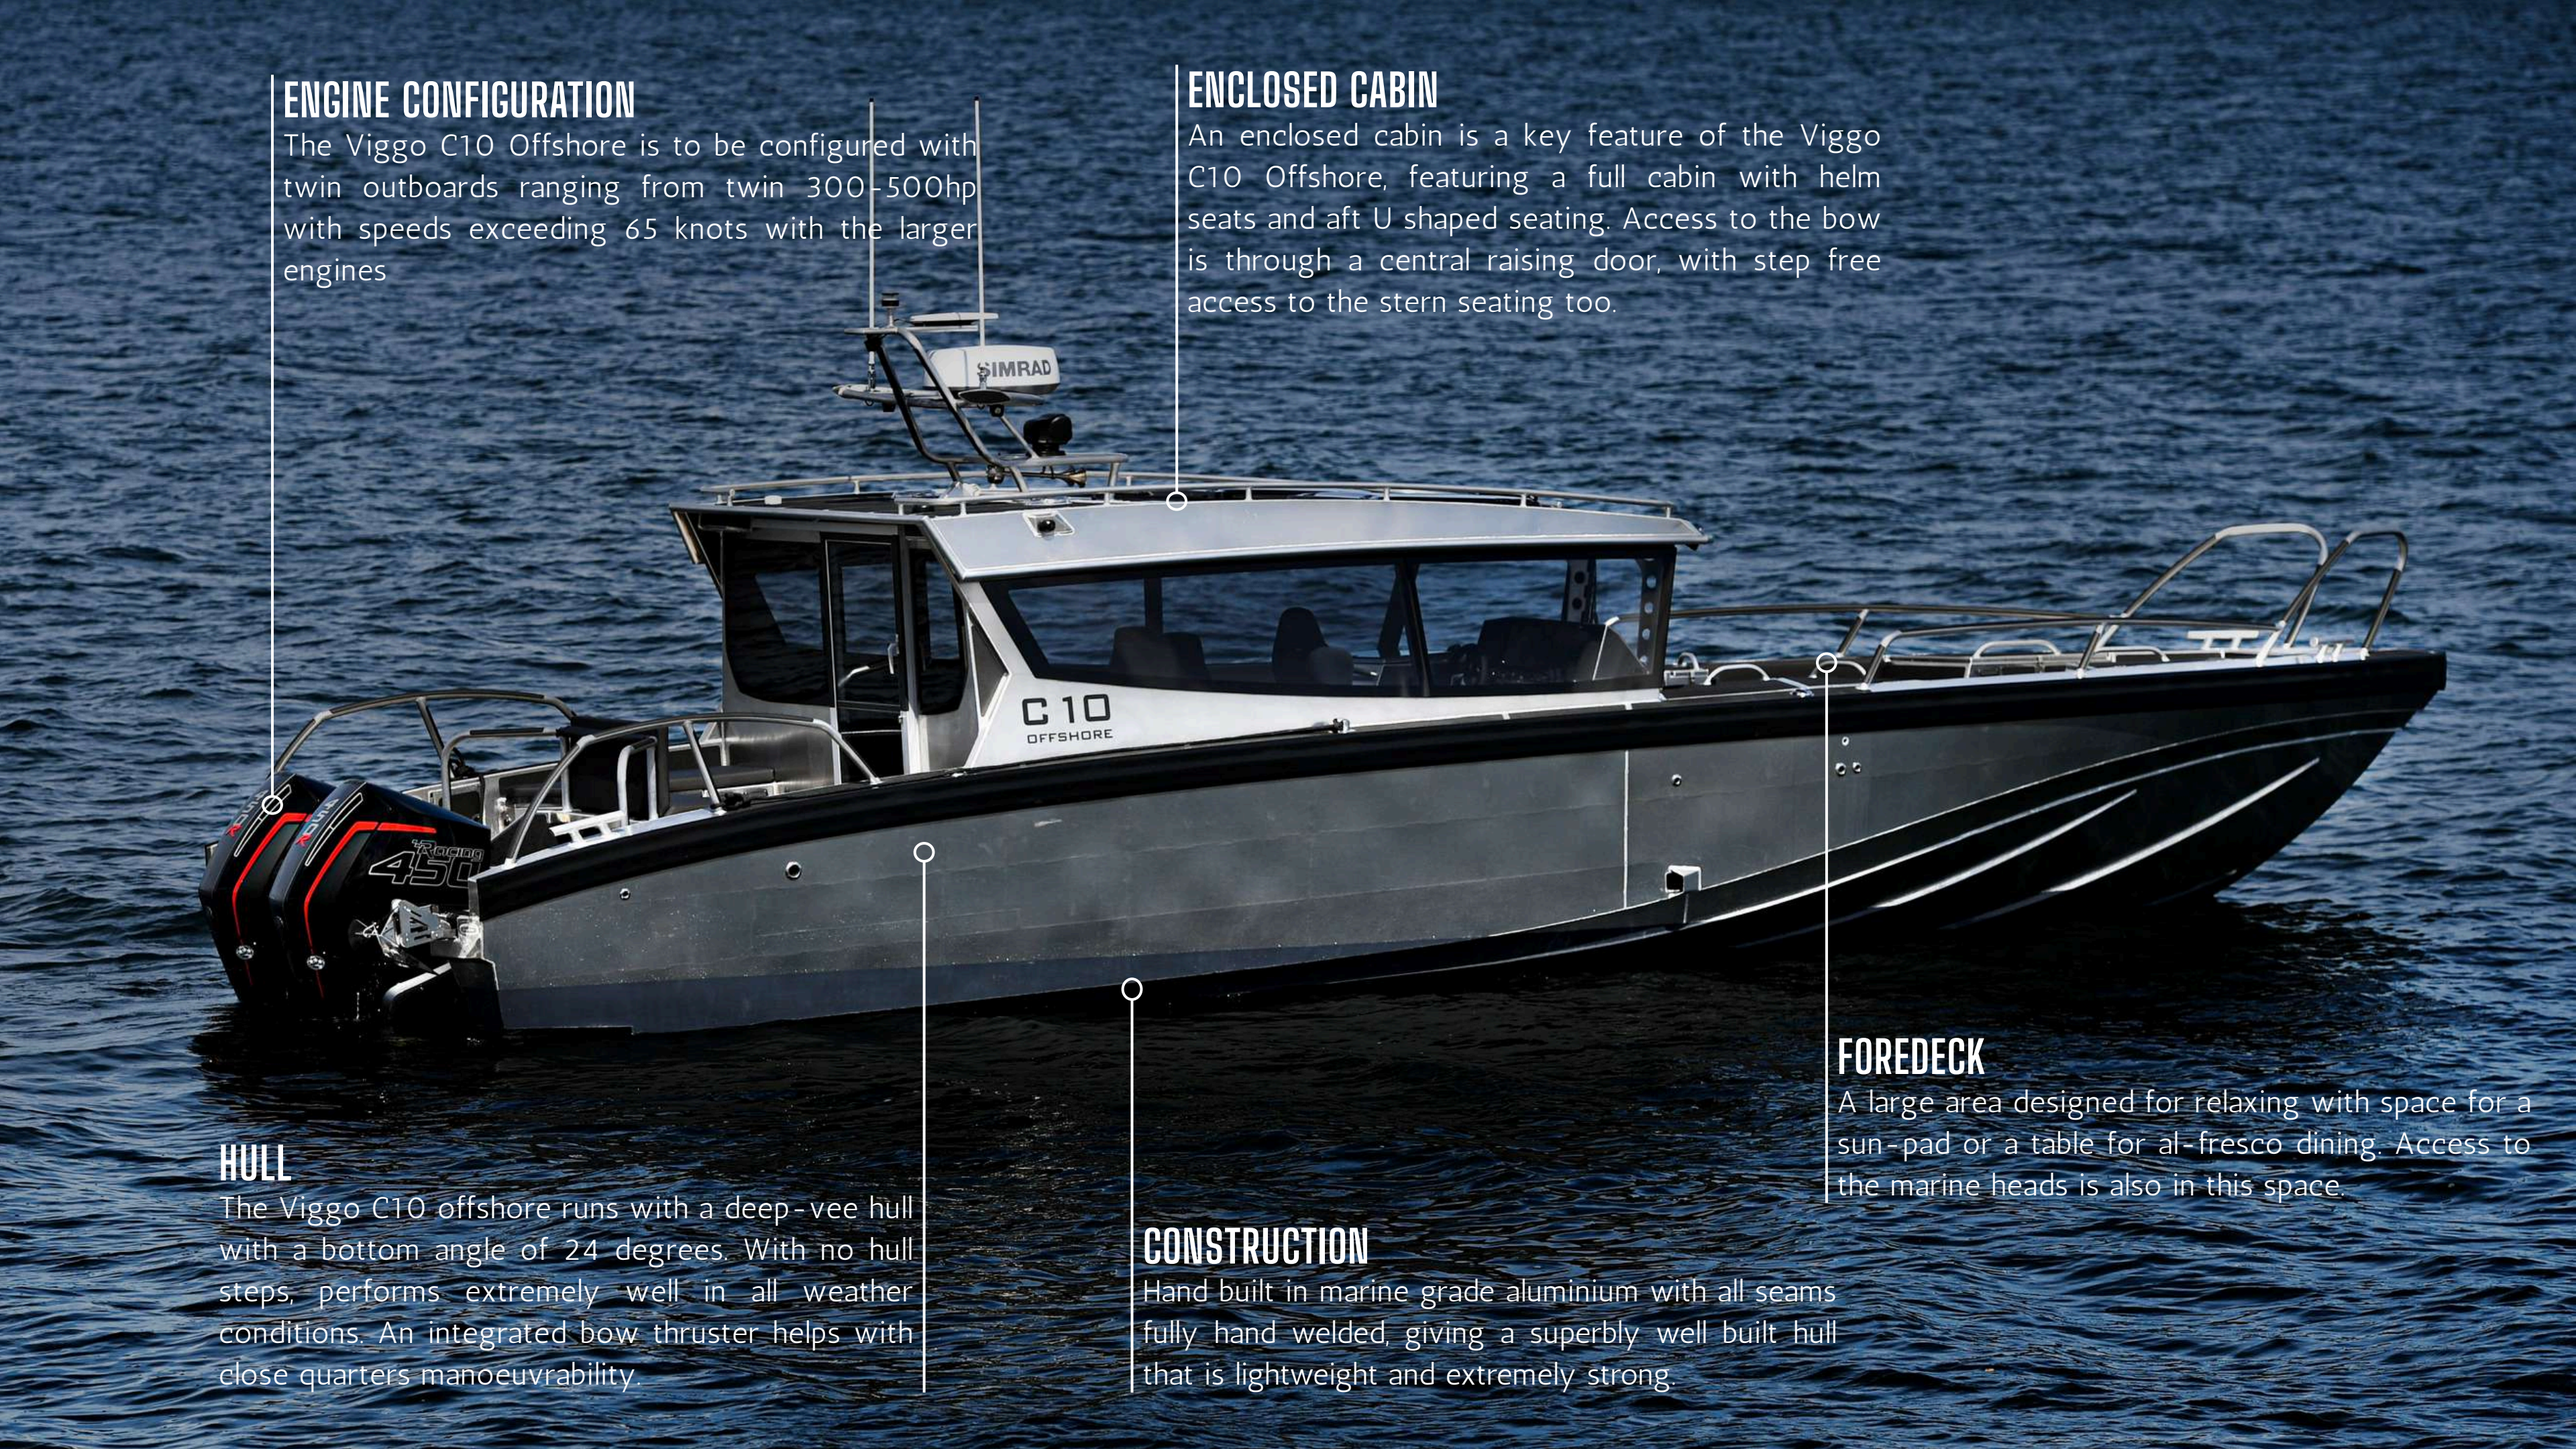

The protected cabin has been designed to provide a practical and comfortable environment for both the helm and passengers, enabling year round boating regardless of the weather. The helm position is arranged for confident operation with excellent visibility, intuitive controls and space for navigation systems, while the surrounding cabin offers a secure and well insulated space for longer passages.

The Viggo C10 Offshore is built for owners who prioritise capability, reliability and performance without compromise. It stands as a highly capable and and commanding offshore vessel designed to travel further, faster and with complete confidence.

DIMENSIONS

LOA:	10.95m
Beam:	2.95m
Draft:	<1.0m
Weight incl. Engine:	4,500kg
Bottom Angle:	24 degrees
Fuel Capacity:	885ltrs
CE Category:	B
Engine Size:	600-1000hp

ENGINE CONFIGURATION

The Viggo C10 Offshore is to be configured with twin outboards ranging from twin 300-500hp with speeds exceeding 65 knots with the larger engines

ENCLOSED CABIN

An enclosed cabin is a key feature of the Viggo C10 Offshore, featuring a full cabin with helm seats and aft U shaped seating. Access to the bow is through a central raising door, with step free access to the stern seating too.

FOREDECK

A large area designed for relaxing with space for a sun-pad or a table for al-fresco dining. Access to the marine heads is also in this space.

HULL

The Viggo C10 offshore runs with a deep-vee hull with a bottom angle of 24 degrees. With no hull steps, performs extremely well in all weather conditions. An integrated bow thruster helps with close quarters manoeuvrability.

CONSTRUCTION

Hand built in marine grade aluminium with all seams fully hand welded, giving a superbly well built hull that is lightweight and extremely strong.
